

PRODUCTSHEET

LifeMCC

Movable Climate Changer

PRODUCT

The LifeMCC is a freestanding and movable plant wall that is planted one-sided. The LifeMCC is equipped with an integrated water reservoir and an automatic irrigation system, which provides the plants with water and plant food in a dosed way. A built-in water level sensor gives a signal when the water tank is empty. The LifeMCC is available in any standard RAL colour.

ABOUT THE PLANTS

Three different plant assortments are available for the LifeMCC. The planting consists of a variety of plants with air-purifying qualities. It is also possible to choose a plant variety according to your own wishes. Plants in an indoor space have a proven positive effect on people's general well-being. Plants not only purify the air, they also reduce background noise and increase the humidity of a room.

APPLICATION

The LifeMCC can be used as a room divider or purely for decorative purposes in every possible interior. Thanks to its modern design the LifeMCC is a real eyecatcher for your living or working environment.

OPTIONAL

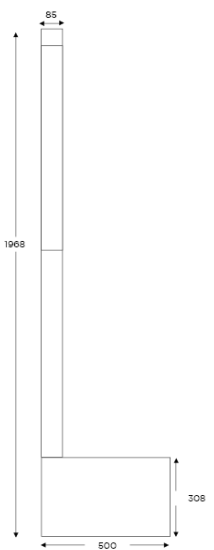

To grow optimally, plants need light. For lighting options and other accessories, please refer to the price list.

INSTALLATION AND MAINTENANCE

It is possible to install the LifeMCC yourself (see installation manual). Naturally, we can also take care of the installation for you.

The maintenance of the LifeMCC is minimal. This consists of regularly refilling the water reservoir -at least once a month- and feeding and pruning the plants (see maintenance instructions).
